Humanitarian Innovation Hackathon

Our Humanitarian Innovation Hackathon is a weekend-long hybrid event designed for university students to work collaboratively in cross-discipline teams to create technology-driven solutions for the most pressing humanitarian challenges.

Humanitarian Innovation Hackathon

The Humanitarian Innovation Hackathon is a weekend long hybrid program with industry leading speakers, team bonding, facilitated mentoring, and exciting diversions that mix up the digital and face to face competition. Our Hackathon will fire up your creativity.

Participants are asked to identify practical solutions for real and current problems from an existing international humanitarian response context.

Since our establishment in 2019, The Humanitarian Innovation Hackathon has seen hundreds of students address significant topics including climate change-induced population displacement, educating for the future, aiding island communities and the provision of clean water.

Dates

- Commences Friday afternoon 21 July 2023
- It will run over Saturday and Sunday, 22 – 23 July 2023

Prizes

- \$5,000 – 1st Prize RedR Ron Johnston Rapid Response

Humanitarian Innovation Awards

Engineering solutions for the most vulnerable

The Professor Ron Johnston Humanitarian Innovation Awards encourages and rewards students to engineer cutting-edge solutions that have a positive impact for people around the world.

With growing humanitarian needs and limited funding, innovative solutions are vital to assist the most vulnerable groups in new and efficient ways.

Our annual Humanitarian Innovation Awards is a means of doing just that, by encouraging and rewarding university students to create cutting-edge solutions that could save lives and make a positive impact on people around the world!
